

KEEP BIRDS AWAY SIMPLY AND EFFECTIVELY

Bird-Out™ humanely repels birds from spaces

Although birds may provide enjoyment for humans, when they roost and take up residence in our business and living spaces, they can create health hazards and leave behind a mess. **With Bird-Out™, an aromatic bird repellent from Rentokil, you can simply and humanely keep birds at a distance to protect people and property.**

Using existing outdoor airflow at your property, Bird-Out™ continually dispenses a small quantity of methyl anthranilate, a food-grade flavoring agent that has a mild grape scent for humans but creates an unwelcoming environment for birds.

Installed in a discreet wall dispenser, Bird-Out can be used tactfully in nearly any outdoor environment, providing effective, continuous bird management against a wide variety of bird species. Bird-Out is EPA-registered for use in commercial, residential and agricultural environments.

Humane

Discreet

Easy install – doesn't damage structures

Secured dispenser

Non-toxic

Ideal for use in high-traffic areas

BIRD-OUT™ WORKS EFFECTIVELY AGAINST:

- Crows
- Geese
- Grackles
- Gulls
- Pigeons
- Sparrows
- Starlings
- Swallows

HOW IT WORKS

Methyl anthranilate, commonly referred to as MA, is a naturally-occurring compound found in Concord grapes, jasmine, mandarin orange, and other plants¹. It is also an FDA-approved, food-grade grape flavoring agent used in products such as soft drinks and candy.

When aerosolized, MA irritates birds' trigeminal nerve, a sensory system located in the upper beak, creating an unpleasant sensation similar to what humans might experience with pepper spray. This triggers a warning to birds that the area is inhospitable, causing them to relocate.

DISCREET AND SAFE FOR EVEN THE MOST HIGHLY-TRAFFICKED OUTDOOR AREAS

From secured or remote facilities such as food processing, logistics and warehousing environments to more public-facing businesses like offices, restaurants, hotels, schools, or recreation areas, Bird-Out is an outdoor solution² that can be installed discreetly in these areas at nearly any business.

- Ledges, window sills, and architectural areas where birds rest
- Patios and balconies, such as those in hotels or multi-family properties
- Outdoor dining areas
- Parks, ball fields, playgrounds, or other recreational spaces
- Parking decks and garages

EFFECTIVE, LONG-LASTING COVERAGE

Each secure Bird-Out dispenser provides coverage for up to 8,000 cubic feet. Snap-in cartridges are replaced every 60 days to ensure continuous, long-lasting bird management to protect your employees, customers, and brand.
